TECHNICAL SKILLS

Frontend

React.js, TypeScript, JavaScript (ES6+), Vite, Tailwind CSS, HTML5/CSS3

Backend

Python, Flask, REST APIs, JWT Auth, Marshmallow, Node.js (basics)

Data & Infra

PostgreSQL, SQLAlchemy, Redis, Prisma, Docker, Ubuntu Server

Tools & Workflow

Git/GitHub, Figma, Model Context Protocol (MCP), AI-assisted development, Web Scraping

CORE STRENGTHS

Remote collaboration · Rapid problem-solving · Technical communication · Autonomous ownership of full project lifecycles · Clean, minimalist, high-contrast UI design

EDUCATION

Software Engineering Program

Moringa School — Nairobi, Kenya
Full-Stack Web Development, Data Structures & Algorithms, Agile Methodologies

PROFILE

Results-driven Full-Stack Developer with a strong foundation across the JavaScript/TypeScript and Python ecosystems. Specializes in building scalable web applications, secure REST APIs, and data-driven dashboards, with a keen eye for clean, high-contrast UI design. Adept at leveraging AI-assisted workflows to accelerate delivery without compromising code quality. A highly motivated self-starter seeking remote freelance contracts, startup roles, and AI evaluation opportunities that reward technical rigor and fast learning.

EXPERIENCE

Freelance Full-Stack Developer 2025 – Present
Remote · Independent Clients

- Design, develop, and deploy custom full-stack web applications for independent clients using React and Python/Flask.
- Configure and maintain remote Ubuntu servers for persistent application hosting, uptime, and status logging.
- Integrate design handoffs from Figma and Model Context Protocol (MCP) tooling to ensure pixel-perfect UI execution.
- Review and harden AI-generated code for technical accuracy, performance, and security best practices before shipping.
- Delivered projects spanning institutional websites, technical proposal documents, and promotional design assets across varied client needs.

TECHNICAL PROJECTS

StackBattle KE **Full-Stack** Flask · PostgreSQL · React
Flask · PostgreSQL · SQLAlchemy · Marshmallow · JWT · React

- Architected a gamified competitive-programming platform for Kenyan university students, built from scratch using an app-factory pattern across 9 backend blueprints with a dedicated service layer.
- Implemented JWT authentication, Marshmallow-validated schemas, secure API endpoints, and real-time leaderboard logic.
- Led production security audits that surfaced and resolved critical issues, including hardcoded secrets, scoring exploits, and blocking synchronous code execution.
- Rebuilt the React frontend from a monolithic prototype into a scalable multi-file structure with real-time score tracking and code-submission workflows.

ApexGrid **Data Dashboard** React · Flask · Redis
React · Vite · Flask · OpenF1 API · PostgreSQL · Redis

- Built a high-performance Formula 1 analytics dashboard tracking live standings, lap times, and race session data via the OpenF1 API.
- Designed a compact icon-rail navigation and live-timing hero UI, enforcing a strict no-silent-failure standard for every interactive element.
- Optimized data fetching and state management with custom React hooks and a centralized formatting layer, eliminating render lag and timestamp-related data errors during live updates.

Personal Portfolio Platform **Web + API** waynekiprotich.online
React 18 · Vite · Tailwind CSS · Flask · PostgreSQL

- Built and shipped a full-stack portfolio site featuring a 12-step project-estimator wizard that pipes structured client inquiries directly to Telegram.
- Refactored the Flask backend into a modular notification package and ran a full UX/UI and SEO audit, shipping production robots.txt/sitemap and closing key discoverability gaps.

ADDITIONAL WORK

- Delivered a full institutional website for Baraka School Kapsabet, including a 9-route React/Vite rebuild with a reusable component library.
- Produced a technical proposal (WRD) document for Techlane IT Solutions.
- Repaired and adapted trading-bot automation logic (Deriv/Binary Bot XML, Martingale strategy) for a client engagement.
